

16 January 2012

Research at the Autism Research Centre, University of Cambridge

To all members of the Autism Anglia community:

We are currently looking for families with **adolescent girls** (ages 12-18) with a diagnosis on the autistic spectrum to consider taking part in research at the Autism Research Centre.

The study is investigating brain activity through the use of a MRI scan. This scan is safe, non-invasive, and poses no risk. Participants will be asked to respond to some questions and will be given some computer-based exercises to do during the scan. Compensation for time and travel will be provided and participants will receive a picture of their brain.

If you would like to find out additional information about this study please email Lindsay Chura at lrc36@cam.ac.uk

Interested families should get in touch *as soon as possible in January* and participation would involve one meeting in the next month or so. It is helpful if you provide a telephone number in your email.

Thank you very much for your consideration!

Situated within the School of Clinical Medicine at Cambridge University, the Autism Research Centre (ARC) is directed by Professor Simon Baron-Cohen and brings together research scientists from a range of disciplines around the world. The ARC also works closely with clinical and advocacy services.
